

PRESS RELEASE

LIVESTOCK WATER RECYCLING RETURNS TO WEFTEC

LWR has been selected to exhibit as a member of the Tech West Canada Delegation

FOR IMMEDIATE RELEASE

CALGARY, AB - (Sept 12, 2019) – As the market leader in animal production waste recovery, Livestock Water Recycling has been invited to return to WEFTEC to exhibit as part of the Tech West Canada delegation. WEFTEC, the [Water Environment Federation's](#) annual technical exhibition and conference, is the largest event of its kind in North America. It offers water quality professionals from around the world with the best water quality education and training available today. LWR will use this opportunity at WEFTEC to establish new international business connections with investors, industry experts and other partners. They will also be meeting with innovation collaborators and R&D partners, while continuing to validate the LWR platform on the world stage.

Water is essential to growing food and yet only 4% of the world's water is recycled for reuse. The need to grow more food to feed our hungry planet has industry looking into non-conventional water resources, mainly wastewater. Treated wastewater is a valuable source of both water and nutrients, contributing to water and food security and livelihood improvements. The LWR System has become the most sought-after sustainability solution in the world by global livestock producers who are looking grow more crops and produce more food using less money and fewer resources. This proven, patented nutrient recovery platform modernizes manure management practices by reducing the volume of livestock manure. This is achieved by concentrating nutrients into crop fertilizers, while recycling back clean water. With consumers demanding transparency, and at the height of the farm-to-table social movement, this technology platform is designed to modernize manure management so that it produces maximum crop yields which results in a high return on investment for producers; while minimizing the environmental impact of livestock farming.

Livestock Water Recycling will be exhibiting with the Tech West Canada Delegation In Booth 7912

“Manure liquids are actually composed of 95% water” says Karen Schuett, CEO and Co-Founder of LWR. “This untapped water source is what made us dive into this industry and now we are working with forward thinking food producers to recapture that water and recover lost nutrient value.”

Livestock Water Recycling’s ability to address nutrient pollution from livestock operations resulted in the technology platform being recognized earlier this year with a [Water’s Next](#) Award for the Water Resources Project/Technology of the year. The Water’s Next national award program honors the achievement and ideas of individuals and companies that successfully work to change water across the country.

“Global food demands are increasing at a time when precious resources have never been more limited. We are grateful to have another opportunity to join the CleanTech West Delegation and are excited to share our part of the solution to this challenge.” says Schuett.

The 92nd annual WEFTEC, brought to you by the Water Environment Federation (WEF), runs from Sept. 23 – 25, 2019 at McCormick Place in Chicago, Illinois USA. The Tech West Canada Delegation is exhibiting in booth 7912.

About Tech West Canada

Tech West Canada is a nimble, accessible and effective access point for companies to get the support they need at a variety of international trade events. Tech West Canada delegates have the opportunity to make a global impact backed by the support of Western Canada. Cleantech West is a collaboration between the governments of Alberta, British Columbia, Manitoba and the Saskatchewan Trade and Export Partnership. For more information visit:

www.techwestcanada.ca

About Livestock Water Recycling, Inc.

LWR is a first-class global manufacturer of manure treatment systems that provide hog, dairy and anaerobic digester operations with patented manure treatment technology to recycle clean water and fertilizer nutrients from livestock manure for reuse at the farm. North America’s leading provider manure treatment systems, the LWR system saves farmers time and money by providing them with a cost-effective solution to manage manure in a sustainable manner. LWR has systems operating throughout Canada and the US. For more information please visit:
